Student representatives comments

Overall, the course provided a welcoming and inclusive learning environment where students felt comfortable engaging in discussions. The course topics were relevant and generally well aligned with the subject area. The field trip was also appreciated and contributed positively to the overall learning experience and should remain a mandatory component.

However, a recurring theme in the feedback is that the course content was perceived as quite introductory for a master's level course, particularly for students with prior forestry background. Several students expressed a desire for more depth, applied content, and analytical work rather than repetition of foundational concepts. Examples include more detailed treatment of topics such as water chemistry, financial calculations in forestry operations, and other practical applications. There is also room for improvement in coordination between lecturers to avoid overlap in introductory material and to ensure a clearer progression of content. Strengthening internal communication within the teaching team could help improve coherence and reduce redundancy. Students appreciated the relevance of the chosen topics, particularly modules such as water in the forest landscape, forest damages, and carbon accounting. However, these were also highlighted as areas where more depth and quantitative or applied approaches would be beneficial. Finally, there is interest in expanding international perspectives and further integrating themes such as ownership structures, forestry operations, and their connections to economics, power, and gender.
