## Course leaders comments

This course was run simultaneously in Alnarp and Uppsala with lectures given using the video-system. In total 12 out of 19 students answered the questionnaire (63%) and the overall impression of the course was good (average grade 4.2) with one student in Alnarp being not that satisfied (grade 2).

Despite the fact that the course is given using the video-connection most students are satisfied with the physical learning environment. Hence the format for the course seems to work.

From last year we made one big change and that was that we divided the written assignment into several smaller assignments connected with journal clubs. The reason for that was that we wanted to give the students feedback on their writing earlier during the course and that the focus of the course was on the methods used to study plants and that the students should start reading scientific papers. Judging from the comments this change was appreciated.

From the course evaluation, we might change the order of the lectures a bit to give more room for self-studies at the end of the course.
