Course leaders comments

I would first like to thank all students who took the time to complete this course evaluation. Indeed, your feedback matter and is an important tool that we use to improve course design, teaching style and methods, and to ensure that the course content meets your needs.

Of the fourteen students who took the course this year, seven students completed the course evaluation, representing a response rate of 50%. Overall, the evaluation results indicate that students had good impression of the course. The majority of respondents (n=6) agreed or completely agreed that the course content had clear links to the learning objectives of the course. One respondent pointed out that s/he "would have liked more clear links to agricultural policy". This is something that we will definitely take into consideration for next year's version of the course. Similarly, six students agreed or completely agreed that their prior knowledge was sufficient and allowed them to benefit from the course.

All students agreed or completely agreed that the course information was easily accessible. The majority of students viewed that the course components supported their learning. Specially, two students commented that "solving problems together in class as good for learning" and that "calculating during classes and then discussion about the problem" was "very good". Nevertheless, a student mentioned that there were repetitions sometimes between the parts taught by the two lecturers involved in this course. To address this comment, we will put more effort into planning of the content of the lectures by discussing jointly and in advance the content of all lectures and by sharing the slides and lecture notes with each other to ensure that such overlaps are eliminated.

Expectedly, students had divided pinions regarding the extent to which the exam provided opportunity to demonstrate what they had learnt during the course (agree and completely agree =3, neither nor =1 and disagree= 2). Next year, we will talk more with the students about the grounds for examination and clarify, from the start of the course, what can be expected.

Finally yet importantly, the responses indicate that the majority of the students agreed that the course covered the three dimensions of sustainable development, covered international perspectives, and gender and equality aspects. We are very glad to see these responses!

Thank you so much for your inputs!
