## Kursledarens kommentarer

My opinion as a course leader is that the course has worked relatively well. The students were generally ambitious and very pleasant to work with. Comparing the results from last year's 12 standard questions, the evaluations were generally similar. The average result improved for 6 out of 12 questions. The average rate of the question of the overall impression of the course has however decreased from 4.1 to 3.9.

The evaluation results indicate that connection to learning objectives, course level in relation to background knowledge, general course information and social learning environment have been very satisfactory. However, evaluation in terms of how well the course relates to sustainable development and international perspectives are still low. Although it is challenging to get these in perspective in a basic course in cell biology, we will try to consider and improve these points for next year.

The feedback suggests that the course lectures were generally well-received, although the comments sometimes appear to point in different directions. Occasional comments that the lectures have unnecessary overlap is clearly recognized and will therefore be taken very seriously. Criticism and suggestions for improvement regarding individual lectures will be presented to the corresponding lecturers.

The group exercises have been very appreciated. One criticism, however, was that there was not enough time for discussion. These and other suggestions on how the format of the group exercises can be improved have been noted and will be taken into account for the course next year.

The laboratory exercises were very well received. Several students have expressed a desire to expand the time of lab exercises and we will try to address these comments next year.

The final examination was generally good. Occasional comments indicate that it was difficult of understanding what was demanded in certain topics. Also, some concerns regarding repetitive content in different lectures, which were also present in the exam are also an issue that needs to be taken into account next year. Finally, I will also pay attention to the date of the examination and avoid it clashing with student celebrations during Valborg...

The response rate to the course valuation was 63% (similar to last year: 62%).

I am the main organizer of the Cell Biology course for the first time this year, so I decided to keep the course structure and content similar to last year. Based on the evaluations and comments from the students, as well as my experience as a course organizer this year, I hope to make improvements to the course next year.
