Student representatives comments

A very much needed course for the Sustainable Food Systems programme which rounds off the other courses in natural systems, marketing, innovation, ethics with a course grounded in economics and global value chains. It should be emphasized how important profitability, margins, transaction costs, regulatory bodies, national institutions and systems thinking are in defining the current and future food system - all of which is covered succinctly in this course.

Some students may encounter difficulties in the microeconomic section due to unfamiliarity and structure of the supporting documents/content. In the future, a clearer structure will smooth this process for the next iteration of the course.

Moreover, due to the online nature of the course, students should aim to actively engage in discussion to increase learning capacities for all in the class. In respect to this, the burden falls on both the students to engage and ask questions, as well as implementing new collaborative learning tools in the actual course material.

On behalf of the students, I thank the course leader and assistant for their energy, persistence and patience in teaching!
