Research methods in social sciences (FÖ0470)

This was the first time this course was offered – and it was a wonder that the students were able to find it! The small class (three active students) became a very intimate and helpful class, eager to contribute to everyone's learning. I am very pleased to see a very high response rate in the course evaluation and good impressions of the course (4.7). It reflects the engagement in the course.

One might see this course as a pilot class were a number of teachers with different areas of expertise (representing the Library, method understandings of various sorts and ethical aspects of research methods). Each week can be seen as a module with a lecture or two which was followed by a task that was presented and discussed at the end of the week. This structure appears to be appreciated by the class (too). The course did not have a concluding classical examination. Instead, the examination was carried out continuously to ensure development of method related insights and skills (reflections, tasks and a research proposal). Students found a very clear connection between learning objectives and course content (5.0), which is very reassuring.

A distance education class requires technical skills, how to handle Zoom and Canvas in addition to methodological and pedagogical insights. It raises expectations on teachers as well as students – of capabilities as well as social skills. The group of teachers that contributed in the course are happy to take the suggestions given during the course to heart in continued development of the course modules. We will also continue to “befriend” Canvas techniques that makes it easy to access material, and information (the use of the calendar, for example). All of us are very happy to have had the opportunity to offer this course in a small class setting, allowing for excessive learning for both students and teachers. We hope that these insights and skills will come in handy for thesis projects and future professional tasks for the students.
