Course leaders comments

The response rate was low, possibly because the student representative collected feedback on the last day of the course.

The connection to the forest (and other biobased) supply chains will be improved (by using more cases, examples, etc.)

The course structure and administration will be streamlined and better communicated.

Different views on exam questions this year will influence the teaching methods, but also lead to clearer information about the examination procedure and requirements.

The schedule will be better re-adapted to "on campus" mode.

More external lecturers will hopefully be engaged but this depends on the number of students in the course.

Student representatives comments

The overall impression of the course was good and the students experienced that their prior knowledge was sufficient. Generally, students spend 26-35 hours/week on the course. Students experienced that the course components and available literature supported their learning. Guest lectures were appreciated, they helped the students to apply theory to practice. An idea is to increase the number of guest lecturers who has a connection to the forest sector for future courses.

Students experienced that the course was covering sustainable development, an international perspective, as well as gender and equality aspects. Students enjoyed that some lectures were recorded and held online, it allows greater flexibility. In addition to this, for future courses, an idea is to compress the lectures. Instead of a 2-hour session/ day, rather spend a whole morning for lectures and have someday off/ week for self-studies.

Regarding if the examination provided the students the opportunity to demonstrate what they had learned during the course, there are some improvements to be done for future courses. Students experienced that teachers and students had different views on what was important for supply chain management and that LCA was given too much space in the exam in relation to the time it was given on the course.

Regarding the final assignment, the student felt that some of the beginning preparations associated with this were too close to the exam, as well as the learning module Circular economy (which wasn't a part of the exam). An idea is to put these earlier in the course.
