Student representatives comments

The overall impression of the course was good and perceived well among all the students. Most students found the course content in line with the course's objectives. However, some students believe that some parts of the course content (production function, production theory, profit maximization, cost function, cost minimization, optimization, finding minimum and maximum, etc.) were just a repetition of what they had already studied in the previous courses. The course content could be improved by adding new topics/concepts related to the dimensions discussed above to give students enough novel material to study and gain a new perspective on production economics. The content and difficulty level of the risk analysis and mathematical programming part were fine. Additionally, students found STATA a new thing in the course content, but some struggled with STATA due to insufficient prerequisites as they came from business backgrounds. Therefore, the assignment part should have more interpretable/practical tasks in the context of production economics besides running regression and estimation in STATA. Most of the exam questions are usually similar to the question of the exercises, and for that reason, students might focus more on exercises rather than course material/concepts. Therefore, there should be some surprises and more conceptual questions from lecture material in the exam rather than just requiring mathematical calculations.
