Course leaders comments

The course reports was a nice reading and showed that the overall design and content of the course is good. However, the report was based on answers from 44% of the students. A few comments may need to be addressed, such as the wish to include more practical exercises and more illness/injury related rehabilitation. As an answer to this, I will try to use more "memory hooks" that are more clinically applied, to gather the practical exercises to one or at the most two periods. As for even more clinically applied rehabilitation, it comes in the next course DO0133 Veterinary rehabilitation- clinical implication, 15 hp the spring of 2025. Finally, this is a very fun course to administer and lecture in- thank you for participating and and it's my goal to improve it the best that I can.
